

Lab Exercise 02 – Develop a web page.

Objectives

By the end of this lab session, you will be able to understand page structure and HTML tags.

Prerequisites

- Experience with any text editor like notepad, notepad++, or Edit plus etc.
- How to navigate through different directories.
- How to type content in a file and save them on a computer.

Introduction

Website is a collection of web pages which are grouped together and usually connected in various ways. A web page is a document commonly written in Hypertext Markup Language (HTML) that is accessible through the Internet or other network using an Internet browser. A web page is accessed by entering a URL address and may contain text, graphics, and hyperlinks to other web pages and files. HTML stands for Hypertext Markup Language, and it is the most widely used language to write Web Pages. HTML describes the structure of Web pages using markup. HTML elements are the building blocks of HTML pages. HTML elements are represented by tags.

Basic HTML Example

```
<!DOCTYPE html> <html>  
  <head>  </head>  
  <body>  </body>  
</html>
```

Lab Exercise 02 – Develop a web page.**<!DOCTYPE html>**

It should include this tag even before the <html> tag. It is not an html tag, but tells the browser, the version of HTML page has written.

<html>

This tag tells browser that this is the start of an html document. All the html document contains between ‘<html>’ and ‘</html>’.

<head>

Text between <head> and </head> tags are the header information. These content does not display on the web page.

<body>

All the information which are displaying on the webpage include between the <body> tag.

Exercise 1: Create a shopping cart (part 1)

1. Create the folder structure as following.
 - a. Create A folder called “IWT”.
 - b. Inside that create a folder named “src”.
 - c. Create A folder called “images” inside the “src” folder.
 - d. Create A folder called “styles” inside the “src” folder.
 - e. Create A folder called “js” inside the “src” folder.
 - f. Create a file named “index.html” and save it in “src” folder.
2. Get the following code and complete it using the given instructions. When completing the code, comment the letter of the exercise right before the answer code.

```
<!DOCTYPE html>
<html>
  <head>
    <!-- add a title (a) -->
  </head>
```

Lab Exercise 02 – Develop a web page.

```
<body>
  <!-- add a logo (b) -->
  <!-- add a header (c)-->
  <!-- add a sub-header (c) -->
  <!-- add a horizontal line (d)-->
  <!-- add a horizontal menu (e) -->
  <!-- add a table (f)-->
  <!-- add a horizontal line (d)-->
  <!-- add a footer (g)-->
</body>
</html>
```

Following is the webpage view of the code
